

Iyeme Salubi

Data Engineer

Wolverhampton | +44 7983 396158 | iyemeaji@yahoo.com | github.com/iyeme-dev

PROFESSIONAL SUMMARY

- Data Engineer with hands-on experience building cloud and lakehouse data pipelines using Microsoft Fabric, Azure Storage, PySpark, SQL and Power BI.
- Built a metadata-driven e-commerce Customer 360 solution using Bronze, Silver and Gold layers, automated ingestion, data cleansing, multi-table joins, aggregation and validation.
- Practical experience across batch and streaming projects using Azure Data Factory, PostgreSQL, Kafka, Spark, Snowflake, dbt, Google Cloud, BigQuery and Terraform.
- Strong software-development foundation with Git/GitHub, Python, Django and JavaScript, with a focus on reliable, documented and reproducible data workflows.

TECHNICAL SKILLS

Data Engineering: Microsoft Fabric, Lakehouse, Data Pipelines, Medallion Architecture (Bronze/Silver/Gold), PySpark, Spark Structured Streaming, ETL/ELT, data cleaning, validation, dimensional/reporting outputs

Cloud & Storage: Microsoft Azure, Azure Storage / ADLS Gen2 concepts, Azure Data Factory, Google Cloud, Cloud Storage, Cloud Run, BigQuery, Snowflake

Languages & Data: Python, SQL, PySpark, PostgreSQL, SQLite, JSON, CSV, Parquet; JavaScript/jQuery, HTML/CSS

Orchestration & DevOps: Apache Airflow (Astro), dbt, Kafka, Docker, Terraform, Git/GitHub, GitHub Actions

Analytics: Power BI, Microsoft Fabric semantic models, KPI cards and reporting

SELECTED DATA ENGINEERING PROJECTS

E-commerce Customer 360 - Microsoft Fabric | Microsoft Fabric | Azure Storage | PySpark | Power BI | Git

- Designed an end-to-end lakehouse workflow with Azure Storage as the source and Fabric Bronze, Silver and Gold layers for ingestion, transformation and reporting.
- Built a metadata-driven Fabric pipeline using Get Metadata, ForEach and Copy Data activities to ingest multiple source files into Bronze as Parquet.
- Developed PySpark cleaning logic for customer, order, payment, support and web datasets, including standardisation, type conversion, null handling, deduplication and key validation.
- Created Gold Customer 360 and customer summary tables by joining datasets on customer_id and aggregating orders, payments, support activity and web engagement.
- Added validation checks across source, Silver and Gold tables, then connected the Gold reporting layer to a Power BI semantic model and report.

Real-Time Stock Market Analysis | Kafka | Spark Structured Streaming | PostgreSQL | Docker | Power BI

- Built a streaming pipeline that ingests intraday stock-market data, publishes records to Kafka, processes them with Spark Structured Streaming and persists output to PostgreSQL.
- Containerised supporting services with Docker and prepared the curated data for downstream analysis in Power BI.

FEMA Cloud-Native Data Pipeline | Google Cloud | BigQuery | Cloud Run | Cloud Scheduler | Terraform

- Built a scheduled cloud pipeline to extract FEMA public-assistance data, store raw JSON in Cloud Storage and load curated records into BigQuery.
- Provisioned cloud infrastructure with Terraform and implemented staging/deduplication logic for reliable monthly loads.

PROFESSIONAL EXPERIENCE

March 2026 – Till Date

AMDARI, United Kingdom

Data Engineer

- Built and maintained data workflows to clean, transform and organise customer, sales and operational data for reporting.
- Used Python and SQL for data cleansing, joins, aggregations, validation and preparation of analysis-ready datasets.
- Automated repeatable processing and reporting tasks, improving consistency and reducing manual handling.
- Used Git/GitHub for version control and documented workflows to support reliable, reproducible delivery.

Dec 2022 – Jan 2026

STERLYN IT, United Kingdom

Software Engineer

- Developed and maintained applications using Python/Django, JavaScript and reusable backend components.
- Worked with SQL and relational databases for data storage, querying, validation and application data processing.
- Built and integrated APIs to support reliable data exchange between applications and services.
- Used Git/GitHub, testing, debugging and technical documentation to deliver maintainable software.

Dec 2013 - Mar 2021

Alliance Medical, United Kingdom

Senior CT/MRI Radiographer

- Managed scanner-site setup projects across NHS environments and performed CT/MRI examinations in safety-critical clinical workflows.
- Performed equipment QA testing, maintained accurate documentation and mentored new graduates.
- Promoted to Senior Radiographer with responsibility for leadership, quality and operational standards.

EDUCATION & CERTIFICATIONS

Jun 2025 - Jan 2026

ETL and Data Pipelines with Shell, Airflow and Kafka

IBM

Jun 2025 - Jan 2026

Full Stack Software Developer

Code Institute, Ireland

Jan 2022 - Jul 2022

Front-End Developer Professional Certificate

IBM

Sep 2011 - Feb 2013

MSc Applying Radiographic Practice

Sheffield Hallam University, United Kingdom

Sep 2002 - Feb 2008

BSc Radiography

University of Calabar, Nigeria

ADDITIONAL TECHNICAL PROJECT EXPERIENCE

Public Sector Urban City 311 Service Report | Azure Data Factory | PostgreSQL | Terraform | GitHub

- Provisioned Azure resource groups, Storage, Data Factory and PostgreSQL infrastructure with Terraform and used Git branches/PRs to manage project changes.

Tourism TripLens Countries Explorer | MinIO | Airflow | Snowflake | dbt

- Orchestrated ingestion with Airflow, staged source data in MinIO/Snowflake and used dbt to transform data across raw/bronze and curated layers.

Airflow ETL - Toll Data | Apache Airflow | Python | CSV/TSV/Fixed-width

- Created an ETL DAG to unzip and extract mixed-format toll datasets, consolidate records and transform vehicle-type fields for downstream use.
